

Sprint 1 Review

Sprint 1 18 Feb 2022 to 11 Mar 2022

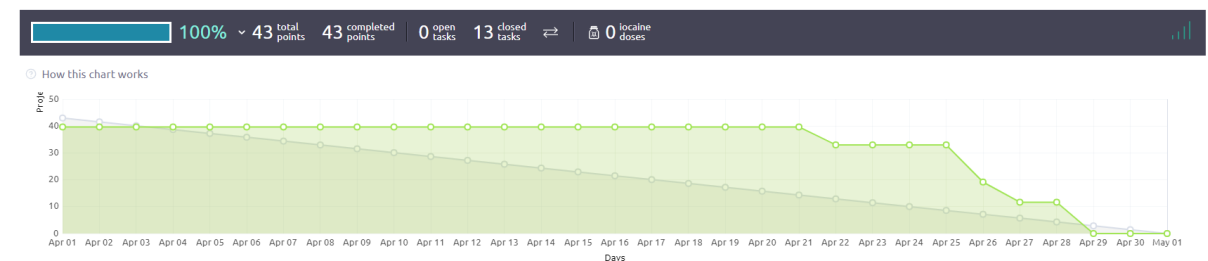

The first sprint was carried out without any major problems. The scope of our initial project was changed into something different, and this caused some troubles at the beginning.

The point allocated for the stories were accurately calculated and we might have underestimated the impact of API on the project.

Considering the weekly diary and the Burndown chart, we probably made an accurate estimation on user stories weight finishing earlier than expected.

Sprint 2 Review

Sprint 2 01 Apr 2022 to 01 May 2022

From the burndown chart, we can see how we overestimated the total work left. The work was focussed more on the last few weeks of the sprint. Taiga was updated more regularly. The backbone of the project was set up in the previous sprint.

Our goals were achieved in less time than planned. Overall, all the tasks were completed on time, and the team benefited from the previous sprint knowledge acquisition. This is reflected in the amount of time allocated to the Sprint tasks in the last two weeks.
